

Nimlok Minnesota produces three different styles of banner products. Each is available as a laminated inkjet graphic or as a dye-sublimated fabric graphic. Your sales representative can supply the appropriate guidelines for the production you choose. The guidelines on this sheet are for file set up sizes of the various styles available.

The RollUp products retract into a base. The extra 13/8" is used to attach your graphic to the roller inside the base.

The Future product has the graphic in a removable retractable cartridge. The extra 2" is used to attach your graphic to the roller inside the cartridge which is then placed inside the base.

The SignUp product is simply a rollable graphic with metal strips at top and bottom that connect to a pole and base. The extra 1/2" on top and bottom is used to attach the hardware to your graphic.
